

**Cyclical Review: November 2019** 

COURSE DISCIPLINE: GEOL

COURSE NUMBER: 111

COURSE TITLE (FULL): Physical Geology Laboratory

COURSE TITLE (SHORT): Physical Geology Laboratory

CALIFORNIA STATE UNIVERSITY SYSTEM C-ID: GEOL 100 – Physical Geology Laboratory

#### **CATALOG DESCRIPTION**

GEOL 111 is an introduction to common laboratory practices and exercises in physical geology, such as identifying common minerals and rocks and understanding simple topographic and geological sections and maps. Note: This course may not be taken for credit by students who have completed GEOL 110.

Total Lecture Units: 0.00

Total Laboratory Units: 1.00

**Total Course Units: 1.00** 

Total Lecture Hours: 0.00

Total Laboratory Hours: 54.00

Total Laboratory Hours To Be Arranged: 0.00

**Total Contact Hours: 54.00** 

Total Out-of-Class Hours: 0.00

Prerequisite: GEOL 101. (GEOL 101 can be taken concurrently)

**Cyclical Review: November 2019** 

### **ENTRY STANDARDS**

	Subject	Number	Title	Description	Include
1	GEOL	101	Physical Geology	discuss current basic understanding of earthquakes, including how they are measured, local issues concerning earthquake risk, and the relationship of seismic activity to faults and tectonic plate boundaries;	No
2	GEOL	101	Physical Geology	list and briefly discuss the evidence behind the theory of plate tectonics;	No
3	GEOL	101	Physical Geology	explain why melting occurs inside the Earth, its relationship to volcanoes,and geographic locations where volcanoes occur;	No
4	GEOL	101	Physical Geology	explain the paradigm of uniformitarianism in the context of a scientific view of Earth's history;	No
5	GEOL	101	Physical Geology	implement basic skills to interpret timing relationships between rock units;	No
6	GEOL	101	Physical Geology	explain the rock cycle and describe the classification of rocks in some detail;	No
7	GEOL	101	Physical Geology	describe processes that shape the Earth's surface	No
8	GEOL	101	Physical Geology	discuss mineral and water resources;	No
9	GEOL	101	Physical Geology	demonstrate a conceptual understanding of fundamental concepts, principles, and interactions of Earth's systems applicable to the geological sciences;	No
10	GEOL	101	Physical Geology	demonstrate an understanding of how geological environments are formed, changed, and eroded through time;	No
11	GEOL	101	Physical Geology	demonstrate an ability to communicate complex course concepts effectively in writing and diagrams and apply critical thinking and problem solving to make informed decisions in life.	No

**Cyclical Review: November 2019** 

- apply the scientific method to measure or describe the physical properties of unknown minerals and determine their identity:
- 2 identify visually common minerals and rocks;
- infer the basic geologic history of an area from rocks, geologic structures, and landforms present in the landscape and develop multiple working hypotheses about the history;
- discuss recurrence intervals of earthquakes on particular faults from calculated slip rates and other data and/or use data to locate the epicenter of an earthquake and determine its magnitude;
- 5 discuss some of the scientific methods used to infer properties of Earth's interior and evaluate the accuracy of the results;
- 6 evaluate the result of a calculation from a data set and discuss its accuracy;
- 7 interpret timing relationships between rock units by applying observations of rock relationships and knowledge of scientific laws;
- 8 read and interpret simple topographic and geologic maps;
- 9 demonstrate an ability to communicate complex course concepts effectively in writing and diagrams and apply critical thinking and problem solving skills to make informed decisions in life.

#### STUDENT LEARNING OUTCOMES

- 1 read and interpret simple topographic and geologic maps
- apply the scientific method to measure or describe the physical properties of unknown minerals and determine their identity
- 3 identify visually common minerals and rocks
- 4 infer the basic geologic history of an area from the rocks, geologic structures, and landforms present in the landscape and develop multiple working hypotheses about the history
- discuss recurrence intervals of earthquakes on particular faults from calculated slip rates and other data and/or use data to locate the epicenter of an earthquake and determine its magnitude
- 6 discuss some of the scientific methods used to infer properties of Earth's interior and evaluate the accuracy of the results
- 7 evaluate the result of a calculation from a data set and discuss its accuracy
- 8 interpret timing relationships between rock units by applying observations of rock relationships and knowledge of scientific laws
- 9 demonstrate an ability to communicate complex course concepts effectively in writing and diagrams and apply critical thinking and problem solving skills to make informed decisions in life

**COURSE ID 004027** 

# COURSE CONTENT WITH INSTRUCTIONAL HOURS

	Description	Lecture	Lab	Total Hours
1	Structural Geology  • Lithostatic stress, differential stress, and strain  • Brittle and ductile rock behavior  • Identification of faults and folds and their relationship to stress	1.5	0	1.5
2	Seismology  • Depth of earthquake foci and relationship to brittle-ductile transition in the crust  • Measuring earthquakes and earthquake magnitude scales  • Locating earthquake epicenters  • Relationship between focal depth, fault size, and earthquake magnitude  • Fault slip rates and recurrence intervals of earthquakes	3	0	3
3	<ul> <li>Earth's Internal Structure</li> <li>Use of s-wave shadow zone to determine the size of Earth's core</li> <li>and evaluate result.</li> <li>Use of earthquake foci data to visualize the Wadati-Benioff zone</li> <li>and contrast these data to data showing the brittle-ductile transition</li> <li>in the crust</li> </ul>	3	0	3
4	Plate Tectonics • Relationships between types of differential stress, types of faults, and types of plate boundaries • Relationships between depth of earthquake foci, volcano types, and plate boundaries • Speeds of plate motion and history of plate motion	1.5	0	1.5
5	Minerals <ul> <li>Physical properties of minerals</li> <li>Testing unknown minerals' physical properties and using a dichotomous key to identify them</li> </ul>	3	0	3
6	Igneous Rocks Intrusive vs. extrusive igneous rocks Rock names and characteristics Intrusive igneous rock structures Use the scientific method to interpret the geologic history of an area that contains igneous rocks	3	0	3

**Cyclical Review: November 2019** 

		Cyclica	l Review: N	lovember 2019
7	Volcanology  • Basic volcano types and their eruptive styles  • Where volcanoes occur and why they occur in those locations  • Eruptive styles and relationship to volcano type and to geographic location  • Why there are different eruptive styles  • Visual identification of basic volcano types and intrusive igneous• structures in the landscape	4.5	0	4.5
8	Sedimentary Rocks  Identifying sedimentary rocks from their visual characteristics  Use of scientific methods to interpret the depositional environment of sedimentary rocks  Identification and interpretation of contacts (structural, depositional, and erosional) with special emphasis on unconformities  Use the scientific method to interpret the geologic history of an area that contains sedimentary rocks	3	0	3
9	Metamorphic Rocks  Types of metamorphism and how metamorphism occurs  Index minerals and metamorphic grade  Identifying metamorphic rocks and a few basic types of metamorphic rocks, including foliated and non-foliated examples  Use the scientific method to interpret the geologic history of an area that contains metamorphic rocks	3	0	3
10	<ul> <li>Geologic Time</li> <li>Relative age dating and its implementation</li> <li>Absolute age dating processes</li> <li>The geologic time scale</li> <li>Basic overview of the big events in Earth's history that determine the boundaries on the geologic time scale</li> <li>Use what students have learned about rocks, contacts, and laws of relative dating to analyze complex rock unit relationships in a cross section and interpret the geologic history of that area</li> </ul>	6	0	6

Cyclical Review: November 2019

		Cyclica	Review: N	ovember 2019
11	Map Reading  • Find latitude and longitude of points on a map  • Find the distance between two points using the scale  • Find the elevation of a point using topographic contour lines  • Find the type of rock or rock structure using layered geologic data  • Use the stratigraphic information given on geologic maps to interpret geologic cross sections  • Remotely sensed data	6	0	6
12	Field Geology  • Use maps in the field  • Make basic field observations and measurements that include the use of global positioning systems (GPS), Brunton compass, or other tools  • Interpreting geologic elements of the landscape and developing simple geologic histories using multiple working hypotheses	6	0	6
13	Surface Environments (at least one of the following)  • Visual identification of key desert features and explain surface processes that create them  • Visual identification of key coastal features and explain surface processes that create them  • Visual identification of key glacial landscape features and explain surface processes that create them  • And either	3	0	3
14	Global Climate Change (1.5 hours)  • Use proxy data to interpret climate  • Evaluate data over time  Or  Planetary Geology (1.5 hours)  • Use remotely sensed data sets, such as cratering density, to infer history or other properties of other planetary bodies	1.5	0	1.5

**Cyclical Review: November 2019** 

### **OUT OF CLASS ASSIGNMENTS**

- 1 field trip reports (e.g. write a report which analyzes elements of an area's geologic history);
- 2 laboratory reports.

### **METHODS OF EVALUATION**

- 1 attendance to lab and performance of assigned work;
- 2 quizzes;
- 3 midterm exam including essay or short answer questions;
- 4 final exam including essay or short answer questions;
- 5 instructor directed student projects for evaluation by peers and/or the instructor

## **METHODS OF INSTRUCTION**

Lecture	
<b></b> Laboratory	
Studio	
✓ Discussion	
Multimedia	
Tutorial	
Independent Study	
Collaboratory Learning	
Demonstration	
Field Activities (Trips)	
Guest Speakers	
Presentations	

### **TEXTBOOKS**
